

EIGHT WAY MANIFOLD SYSTEM

The SEA CON[®] eight way manifold system is the perfect solution for extreme situations where dependability is a must. The thick stainless steel design provides more dependability and durability than other penetration systems. The SEA CON[®] eight way manifold system allows up to eight separate connectors to exist while maintaining only one high density penetration.

The system pictured features eight SEA CON[®] MINK-4#20-WCR555 connectors and has an open face pressure rating of 5000 psi. In addition, to increase the versatility of the SEA CON[®] eight way manifold system, each cable features 90 adjustment area ($\pm 45^\circ$ from horizontal position) as shown in the middle.
